

## What hit the Pentagon?

**This is one of the few photographs available showing the Pentagon immediately after it was struck and before the collapse of the wall. How does a Boeing 757 fit into this hole?**

## Release the Videos!

**Whilst there are around 80 recordings of the incident at the Pentagon only a few poor quality frames have been released —these do not appear to show a Boeing 757.**

**Analysis of the raw Black Box data obtained from the National Transportation Safety Board has confirmed Flight 77 was nowhere near the 5 light poles that were reportedly ripped from the ground – a claim that appears in the Official 9/11 Commission Report. Furthermore, the plane's altitude was too high for it to have hit the Pentagon.**

**(NTSB's Jim Ritter - who signed off the Flight 77 study – was contacted by pilots-for911truth.org but he refuses to make any comment)**
